

Payment Processing, Inc. Announces the Availability of PPI PayMover Managed Payer Data

Solution allows software developers to remove card data storage while retaining application functionality for repeat, recurring and standard transactions

Newark, CA – December 9, 2009 -- Payment Processing, Inc. (PPI), the industry leader for integrated payments, today announced the availability of **PPI PayMover Managed Payer Data**, part of the company's Point-2-Point Cardholder Data Security Program. A free product available with the PPI PayMover hosted platform, Managed Payer Data removes the need to store PAN (cardholder Primary Account Number) data at the merchant location while allowing application developers to retain functionality supporting repeat, recurring and standard transactions across all verticals.

PPI Executive Vice President Chuck Riegel commented, "We have seen developers removing functionality from their applications that need access to stored card holder data just to pass PCI compliance validation. PPI PayMover Managed Payer Data gives the developer the ability to remove card data storage and retain the functionality that uses card data, thereby adhering to the PCI regulations."

Key Features of PPI PayMover Managed Payer Data

- Supports repeat, recurring and standard customer transactions
- Implements tokenization as an alternate account or transaction identifier for business processes that require the PAN to be utilized after authorization (such as processing recurring and returning customer payments)
- Supports both credit card and automated clearing house (ACH) transactions
- Services can be implemented using the free PPI PayMover Software Developer Kit

PPI's comprehensive solutions are developed and supported completely in-house by payment processing technology and service experts. Each solution includes all of the critical components needed for successful integrated payments including:

- Free, feature-rich and fast hosted payment technology
- Secure, reliable transaction processing operating seamlessly within the application
- Free integration/certification services with developer kit
- Dedicated account managers for developers and their resellers
- Aggressive revenue sharing programs
- Marketing services to promote the integrated solution
- Free, unlimited 24/7/365 support

About the PPI Point-2-Point Cardholder Data Security Program

Designed to help application software developers enhance product security functionality and achieve Payment Card Industry (PCI) compliance at a fraction of the cost, the PPI Point-2-Point Cardholder Data Security Program provides all-inclusive security solutions that address the domain of the software application – point-2-point (card data in transit between the application and the payment gateway). Developers benefit from products to encrypt all types of credit card data prior to use by the software application, the ability to differentiate software applications through significant security functionality, and the opportunity to reduce (and potentially eliminate) PA-DSS compliance costs.
